Our commitment to excellence in sourcing, formulation and manufacturing embraces every predicate of product quality. Of these, purity is the most fundamental. Delivering on our promise of unconditional purity in each product begins with sourcing the finest raw materials available.

In March, 2010, suppliers of betaine HCl were no longer capable of providing raw material that conformed to our rigorous purity specifications. Subsequent evaluation of material from three additional suppliers revealed similar short-comings. In keeping with our philosophy and responsibility as an industry leader, we initiated a multidisciplinary effort to identify a manufacturer that maintained the same unyielding principles and quality standards as Pure Encapsulations.

In August 2010, we began a collaboration with a German manufacturer to secure betaine HCl that precisely and unconditionally conforms to our strict definitions of purity. The timeline of this initiative necessitated a backorder of our Betaine HCl Pepsin. A 9-month effort brought this project to fruition on April 5th, 2011, when the new material arrived at Pure Encapsulations.

While synthetic betaine HCl is the choice of most nutritional supplement companies in the U.S., our German manufacturing partner is one of the very few suppliers of natural betaine HCl. Our new betaine HCl is derived from beets and delivers a degree of purity that is unmatched. We extend our appreciation for your patience and loyalty as we have maintained our promise to bring you consistent purity and quality in every finished product.
