

# Neural Organization Technique

## Seminar in ENGLAND

Neural Organization Technique is a holistic technique which brings an understanding and a global treatment of the different aspects of the body. **Since 1976, Dr Carl Ferreri D.C.** developed one of the most remarkable tools for to manage chronic and difficult problems.

Based on the neurological sequences of the primary survival functions, Feeding, Fight/Flight, Reproduction. Dr Carl Ferreri D.C. has drawn **from Applied Kinesiology, Sacro-Occipital Technique, Upledger cranial techniques and Chinese Medicine** to synthesize something new. With N.O.T. you will be able, through a very precise protocol, to reorganize deeply the nervous system of your patients.

Practitioners who have trained in Neural Organization Technique have consistently found that, when this technique has been properly applied to help reorganize their patient, other treatment modalities become more effective and efficient.

**Therefore N.O.T. is complementary to any practice style. It can be applied prior and in conjunction of your usual approach. It is a fantastic tool to treat your chronic cervical patients, all types of TMJ problems, the unstable Category Two, to release the dural tension in the cranium and in the spine. You will be able to increase the immune system, the endocrine, the digestive, the circulatory and the cardiac function of your patients. With a specific cranial protocol you will help the leaning disable children. A durable stability of the corrections, rapid results and an increase of your scope of treatment produce a dynamic practice.**

In order to maximally optimized the NOT integration in your practice, the best conditions will be provided: Technique manual, video power point projection, ample time is spent in guided hands on practice to allow you to immediately apply these powerful tools in your office.

### **What past attendees think of the N.O.T. seminars:**

A complete approach to help people R. K. Holland

Ability to affect systems that are not directly possible with the other techniques I used so far  
N.F. Holland

Extremely good care material. Instructor very good and helpful to all participants on seminar  
Ph. T. England

A technique that truly respects the innate intelligence. I liked the commitment to the group from the instructor Fr. J. Sweden/England

Stop just working on the structural and find out about the bigger picture J.W. England

A more European and Cartesian presentation G. W. Belgium

# **NOT MODULE 1: BASIC 1**

## **MAY 21st & 22<sup>de</sup> 2011**

**For each unit, tests and corrections will be demonstrated.**

### **1<sup>st</sup> neurological unit**

#### **Atlas mobility**

**Categories :** Definition

**Category I :** Dural adaptation in reaction to a stressor.

#### **Switches**

**Universal cranial fault :** Its importance in all systemic, auto-immune and genetic problems...

#### **Head and pelvis centering reflexes :**

- Neuro – anatomical support and relation to primary functions.
- Dysfunctioning repercussions on the facilitation / inhibition mechanism and by extension on gait and articular physiology.

### **2<sup>nd</sup> neurological unit**

**The Cranial Injury Complex :** Relation to chronic cervical problems and the characteristic reactive muscular chain.

### **3rd neurological unit**

#### **The temporo-mandibular joint:**

An approach to this joint in relation to the primary functions.

This part is particularly interesting for collaboration with dentists and orthodontists.

**Universal jaw I:** relation with hypotonicity of muscles below the diaphragm

**Defensive jaw (Emotional/pain control) / Coccygeal release for dura**

**Fascial defense system**

### **4<sup>th</sup> neurological unit**

**The Pelvic Injury Complex :** A very important step to fix chronic sacro-iliac problems.

**Structural jaw complex : Category II** Connection between S.I. joints, T.M.J. and the skull.

**Lumbar and disc involvements : Category III**

## NOT MODULE 2: BASIC 2

### OCTOBER 29<sup>th</sup> & 30<sup>th</sup>

#### 5<sup>th</sup> & 6th neurological unit

**The Limbic/Immune system complex:** Limbic vertebral fixation pattern  
Organic, digestive and adrenal steps

**Universal jaw II :** Its relation with diaphragm and perineal muscles.  
Its correlation with urine retention, organ ptosis  
and gynaecological problems.

**Digestive jaw:** Its relation with the digestive steps.

**Chronic valve problems :** ICV, cardia , pyloric and Houston valves.

#### 7<sup>th</sup> neurological unit

**The Endocrine system :** A functional approach in relation to the primary functions.

« Mini » **endocrine programme** / skin direction and digestive problems

**Primary endocrine programme** / Liver, adrenals, thyroid, pituitary, pancreas, gonads...

**Access to a circulatory deficit** / adrenal's balance.

**Liver congestion** / Lymphatic drainage of breasts

**The Cardiac back syndrome:** A common finding in persons under physical and/or  
emotional stress. This protocol is very important as it is one of the first signs of impending  
heart troubles.

**Peripheral circulation balance.**

## NOT MODULE 3 : ADVANCE

### DECEMBER 4th & 5th 2011

#### **The Idiopathic Scoliosis**

Even if the scoliosis protocol is first involved in a structural way, it can also be related to an  
emotional stress as demonstrated in the advanced Module IV.

A neurological approach as a compensatory reaction to a deficit created into the vestibulo-  
ocular route.

This procedure can change patient's life when they present very chronic vertebral pains that  
don't react to other techniques. It can be very useful even for the patient already having  
surgery. The typical muscular reactive chain.

#### **How to help patients presenting learning disabilities (L.D.), behavioural troubles, hyperactivity, emotional stress, etc. Very useful if you work with disabled and/or gifted children.**

- Cranial section
- Vestibulo / ocular reflex system and Spheno-palatine component
- Auditory processing component
- Peripheral visual and auditory distractibility tests
- Directions of eye muscle fault in dyslexia
- Special section for A.D.D. and A.D.H.D
- Emotional release technique.
- Review of all the protocol and how "to think" N.O.T. in the  
context of typical health problems.
