

The particular formulation of FLEX UC-II and the special mixing used determines the maximum effectiveness of the components which synergistically enhance each other.

Promotes the physiological functionality of cartilage and natural joint flexibility

INGREDIENTS :

- **STANDARDIZED NATIVE COLLAGEN TYPE II UNDENATURED (UC):** is an innovative active ingredient patented through a particular low-temperature, non-enzymatic process that guarantees maximum purity and bioavailability. The specific mechanism of action of UC-II works on the immune system, interfering with the process of destruction of joint collagen, suppressing and deactivating the production of *T-Killer* cells, which are responsible for the activation and the inflammatory process.
- **BOSWELIA (TITRATED AT 65% IN BOSWELIC ACIDS):** better known as *the incense tree*, it has always represented a fundamental element of the medicinal tradition due to its properties. In fact, it promotes physiological joint functionality and is a valid support in counteracting localized states of tension.
- **VITAMIN B6:** contributes to normal energy-yielding metabolism and normal homocysteine metabolism. It promotes the normal function of the immune system and the reduction of tiredness and fatigue.
- **VITAMIN C:** contributes to the maintenance of the normal function of the immune system during and after intense physical effort, to the normal formation of collagen for the normal function of bones and cartilage. It also protects cells from oxidative stress.
- **VITAMIN B1:** contributes to normal energy metabolism and to the functioning of the nervous system and cardiac function.
- **VITAMIN D 3:** essential for the normal absorption and utilization of calcium and phosphorus. Contributes to the maintenance of bones and normal muscle function.

HOW TO USE

1 capsule per day away from meals
