Dear Colleague

Welcome to our April nutritional update for practitioners. The aim of this regular news update is to keep you up-to-date with research findings from the nutritional industry, launch of new products and special offers from Pure Bio Ltd, and to help keep you abreast of products available for your patients and when and how to use them.

In this issue

- [Latest research on longer life](#)
- [Vitamin D deficiency linked to peripheral neuropathy](#)
- [Product Focus - Vitamin D3](#)
- [Latest Pure Bio News - We are recruiting!](#)
- [Spring Sale](#)
- [Pure Bio Gift Vouchers](#)
- [Quote of the Month](#)
- [How to Find Us](#)

Featured Articles

[A HEALTHY HYPOTHALAMUS LINKED TO LONGER LIFE](#)

Scientists have identified the hypothalamus as the part of the brain that can help us live longer and they've seen, in experiments with laboratory mice, what can happen if it starts to malfunction.

People with a healthy hypothalamus can live up to seven years longer, say scientists from Washington University in St Louis.

The hypothalamus regulates the body's organs and fat tissue that, in turn, provide feedback in a loop that is essential for energy production throughout the body. When this feedback loop starts to deteriorate, chronic health problems develop.

The scientists identified an enzyme, called eNAMPT, that fat tissue releases as part of the communication loop to the hypothalamus and that maintains strong connections to the brain.

Other ways to maintain healthy hypothalamus functioning include eating a diet of fruits, vegetables and healthy fats; supplementing with vitamins C, B1 and B2, as well as chromium and essential oils; exercising regularly; getting a good night's sleep and reducing stress levels.

[VITAMIN D DEFICIENCY LINKED TO PERIPHERAL NEUROPATHY](#)

Vitamin D deficiency is independently linked to the risk for diabetic peripheral neuropathy (DPN) by potentially affecting large nerve fibres in older patients with type 2 diabetes (T2D).

Although previous research has shown that vitamin D deficiency is common in patients with diabetes and may increase the risk for peripheral neuropathy, its effects on large and small nerve fibre lesions have not been well explored yet.

Product Focus

VITAMIN D3

WE HAVE A FULL RANGE OF VITAMIN D3 SUPPLEMENTS IN DIFFERENT STRENGTHS AND IN CAPSULE OR LIQUID FORM, AND VEGAN OPTIONS TOO.

Vitamin D is a hormone that promotes intestinal calcium and phosphorous absorption and reduces urinary calcium loss, thereby supporting optimal levels of serum and tissue calcium and healthy bone composition.

Vitamin D3 is naturally produced in human skin in the presence of UVB light. There is a growing recommendation for 20 minutes of sun exposure daily (without sun cream but outside the intensive period of midday - 3pm), as this is estimated to produce 2,000iu of vitamin D3 in the body.

Vitamin D receptors are found on most cells in the body, including immune cells, lymphocytes and macrophages.

Vitamin D is essential for maintaining healthy bones and teeth, for normal functioning of the immune system (including the inflammatory response to wounds and infection) and for supporting normal cell division.

Vitamin D3 deficiency is pandemic, due in part to the modern-day indoor lifestyle, to the use of sunscreen and due also to dietary changes.

Also available as [5,000iu](#), [2,000iu](#), [400iu](#) or in [liquid](#) form.

It is recommended that individuals using more than 2,000iu Vitamin D per day have their blood levels monitored regularly.

This product is:

- Free from gluten
- GMO free
- Suitable for vegetarians

Special Note:

If pregnant or lactating, please consult your healthcare practitioner before use.

Recommended Dosage:
